

Skin Rejuvenation Red Light Therapy:

Red Light Therapy is a skin rejuvenation treatment designed around replacing invasive procedures such as peels, surgery, or injections. The Skin Rejuvenation system uses red light phototherapy to revitalize the skin. This system, when used several times a week for 15 minutes per session creates a noticeable reduction in the appearance of fine lines, wrinkles and facial blemishes. These treatments stimulate and revitalize the skin, providing you with a younger, healthier look.

Benefits of Red Light Therapy include:

- Smooths and reduces fine lines and wrinkles
- Promotes collagen and elastin production for firmer more youthful looking skin
- Balances skin coloration and complexion
- Increases blood circulation to bring more nutrients and oxygen to skin cells for healthier skin
- Increases moisture retention for smoother skin
- Speeds the healing process to reduce scars, pockmarks, pigmentation spots, and age spots
- Reduces inflammation in skin conditions such as acne

SKIN REJUVENATION TREATMENT:

- (3) 15 Minute Sessions Per Week for 8 Weeks required.
- Maintain results with (1) 15 Minute Session Per Week.
- Session appointments can be made at your convenience.

EFFECTS OF TREATMENT: Read Below

The initial effect is clearer, brighter, and tighter feeling skin. The long-term effect is improved skin clarity, tone, and texture. Fine lines and wrinkles, sagging skin, and dark circles as well as puffiness around the eyes are reduced, while the effects of environmental damage and chronological aging are minimized.

RED LIGHT - ST: Suggested Products

Treatment Lotions & Serums will enhance the optimal results of red light therapy

• STEP 1: Micro Mist

Helps prepare your skin for light therapy by establishing your skin's proper PH balance.

• STEP 2: Post Therapy Serum

This Ultra light, fragrance free facial serum helps reduce fine lines and wrinkles instantly while supporting and stimulating intracellular energy.

• STEP 3: Post Therapy Lotion

Reduces the appearance of cellulite and keeps your skin smooth and supple.

FREQUENTLY ASKED QUESTIONS:

What can I expect from Skin Rejuvenation Red Light treatment?

Treatments using red light will improve skin tone and texture, control pigmentation spots, help reduce pore size, encourage vibrant, healthier-looking skin, and reduce wrinkles. Anti-aging red light therapy stimulates circulation and repairs the elastin fibers within tissue to help keep skin firm.

Are red light treatments safe? What does the FDA say?

According to the FDA, red light at 633nm has a "non-significant risk" status and is completely safe for the eyes. Red light penetrates tissue to a depth of 8 – 10 mm, delivering energy to stimulate a response from the body to heal itself.

How does Skin Rejuvenation work?

Red light at 633nm is absorbed by the mitochondria of the cell and stimulates intracellular energy transfer (ATP) production for enhanced cell vitality and permeability, increased production of new collagen, and increased turnover of collagen and elastin fibers. Laboratory studies have shown that skin cells grow 150 – 200 percent faster when exposed to certain light wavelengths, and research has shown red light delivers powerful therapeutic benefits to living tissue.

How does Red Light therapy differ from laser treatments?

Red light therapy does not cut, burn, or break the skin as with laser treatments. Lasers use heat and concentrated light to vaporize or remove tissue. Skin Rejuvenation lamps produce no vaporization or burning of tissue, and therefore no inflammation or erythema. Red light therapy is one of the few non-invasive tools available that can reverse the appearance of aging skin, such as wrinkles and mottled skin tone.

Does red light therapy produce the same light as from the sun? Can it damage my skin?

Red Light at 633nm wavelength is a very thin slice of the visible light spectrum. It contains no harmful rays including UVA or UVB rays.

How soon do results become noticeable?

There are few immediate changes to skin, as change occurs naturally over a period of weeks. Everyone reacts differently, depending on their age and the condition of their skin. In general, best results are achieved over an 8 – 12 week period.

Does Skin Rejuvenation treat acne, age spots, and sun damage?

Red light helps remove the bacteria that causes acne, and generates cellular activity that deals with age spots and sun damage. Anti-aging red light therapy brightens skin and reduces the formation of pigmentation marks.

Does red light therapy work equally well on all skin types?

Skin Rejuvenation therapy is safe and effective for all skin types and colors. The main prerequisite is that skin be clean for effective light transmission.

How long do the results last?

Results depend on the original conditions being treated. After an initial 8 week treatment, results can be maintained with 1 session per week. If maintenance treatments are discontinued, the natural aging process will gradually return.

Is Skin Rejuvenation treatment expensive?

Skin Rejuvenation Red Light therapy can duplicate the benefits of treatments using laser, peels, and microprocessor but at less than 1/2 the cost.
